Cecil - Thanks. I will need to get a briefing on the entire Regional picture, including timelines, assuming the national rollout happens next week.

Shawn: FYI I asked WPD if the two above cities had other water connections if The numbers are confirmed. See two emails below. We still need to gather some information on water pressure.

Subject: RE: PFOA

I found in our SDWIS database that there is an interconnection listed between Martinsburg and Berkley County PSD. We'll have to find out if

that can provide enough water to sustain Martinsburg until treatment can be installed.

Martinsburg's sources had variable levels of PFCs. Some samples were even non-detect. One source is a spring and the other is a well but both are influenced by surface water and are filtered systems like a normal river or lake source. Both are in limestone formations so contaminants impacting the sources could be flashy.

Karen, let's talk tomorrow about mapping the wells for both of these systems.

Subject: Re: PFOA

The Doylestown system has several other wells available but I'm not sure about interconnection and potential pressure issues, but there are other wells that will not be impacted

I'll need to verify the Martinsburg system and whether there are other alternative sources besides the two impacted springs. The resampling will confirm current situation

Martinsburg might. I don't know about Doylestown. The Doylestown wells (2 or them) were originally a small system that Doylestown Authority bought. I may be able to find out or at least get a hint by tonight from a fly-away kit database.

Do you know if Martinsburg and Doylestown have access to other water supplies (i.e. a PWS).

Cecil,

Karen is probably on her way home. Both of those systems' wells will be over the expected new health advisory based in the samples collected under the UCMR. Martinsburg was going to sample again on there own. We have not yet talked to PADEP about the Doylestown wells. Those were last sampled in 2014. Doylestown's wells will need to be sampled again to verify they will still be over.
